

How to replace a halogen bulb on your Westin hood

Before you start: ensure that the replacement bulb has the same wattage as the one which you are replacing. Using a bulb with a higher wattage may damage the transformer.

1. Remove the frosted glass lens by carefully prising off the lens retention ring, taking care to support the glass so that it does not fall. (a fingernail, flat screwdriver, butter knife or similar can be used to prise off the ring. take care not to scratch the chrome bezel)
2. Grasp the lamp and carefully pull it sideways away from and out of its connection block.
3. Insert replacement lamp.
4. Place the frosted lens with smooth face facing downwards (the face you will see) into retention ring, offer the ring up and align the ring clips with the corresponding innermost slots in the chrome bezel and push the ring back into place – this is easiest if one clip is inserted with the ring at a slight angle (so that you can see it has located properly) and then pushing up to engage the remaining two clips.
